CIS 4339 Debugging/Enhancement Exercise

Keith Lancaster

February 13, 2019

Overview

The purpose of this class activity is to provide experience in correcting bugs and making enhancements to an existing application.

Issues List

Issue	Description
1	Something broken: application cannot load - undefined local variable or method 'taks_path'
2	The job class must have a location field to hold the street address where the job is to be performed
3	User interface for task needs way to pick job
4	There should be a field in the Task that allows it to be marked as completed
5	There should be a field in the Task where the number of hours worked can be entered
6	The word "Task" is misspelled on the New Task page!
7	The Task list should include the job that the task belongs to
8	A job should be able to be marked as completed
9	The job list should have completed jobs listed separately from incomplete jobs
10	Jobs can be created with no name!

Turning in the assignment

Turn in the ssh clone key to Blackboard. This is a graded assignment (not an automatic 100). Grading is based on how many of the issues you *correctly* address.
